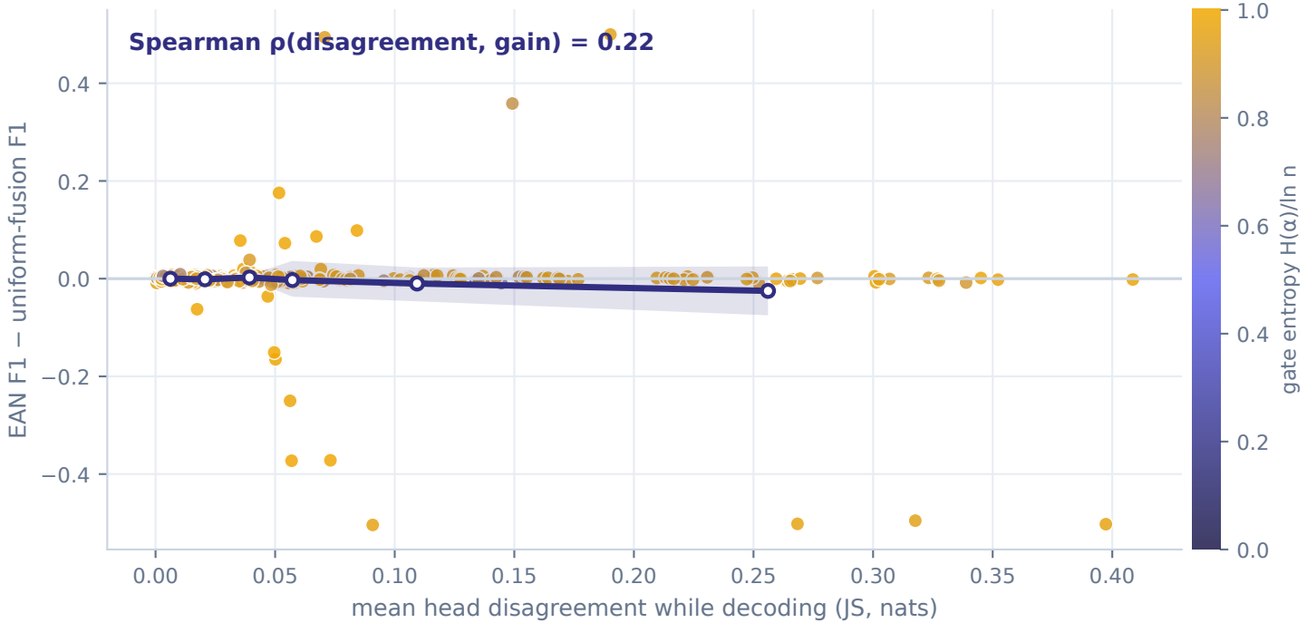
Is the gate worth having?

240 test answers pooled across splits · the gate earns its keep only if gain rises where heads disagree and where it commits

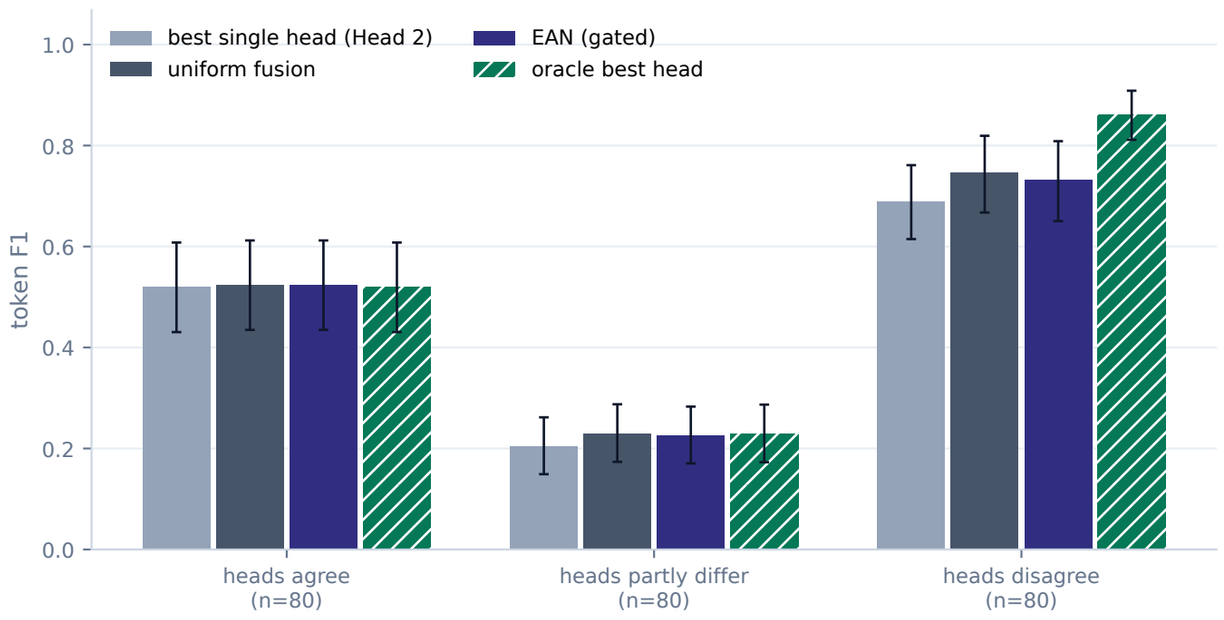
a Does arbitration pay off when heads disagree?

each dot = one test answer · line = binned mean ± 95% CI



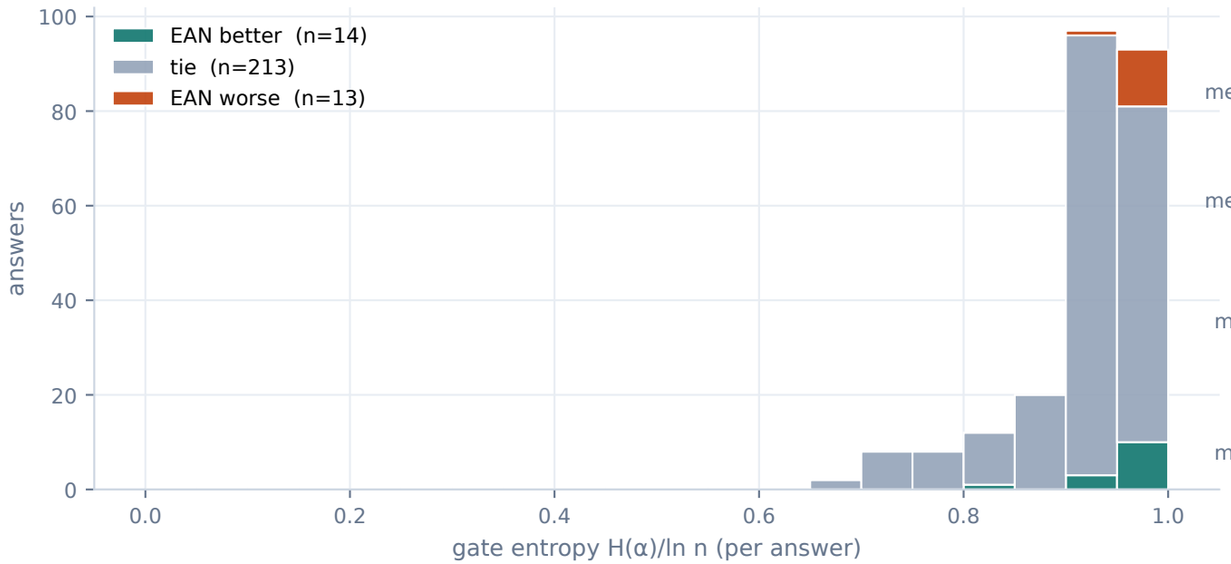
b Answers split by how much the heads disagree

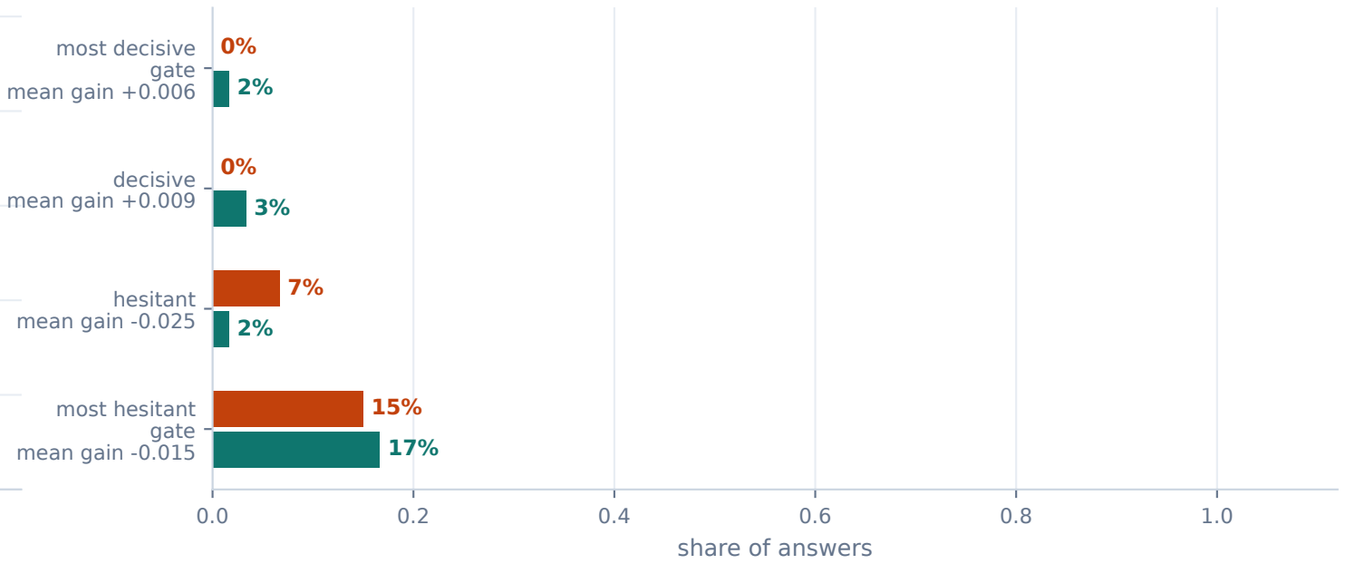
terciles of the spread of the heads' individual F1 · whiskers 95% CI



c Gate confidence at the moment of the outcome

confident gate = low entropy · does EAN win more when the gate commits?



d Win / loss rate by gate decisiveness


answers grouped into quartiles of gate entropy
